

detect and identify

# **IEC 62303 Tritium Standard**

**Dr. Alfred Klett**

**Berthold Technologies, Bad Wildbad, Germany**

**21<sup>st</sup> Annual Air Monitoring Users Group (AMUG) Meeting  
Palace Station Hotel, Las Vegas, Nevada, USA, 5th May 2009**

## Berthold Technologies in Bad Wildbad

- ▶ German Manufacturer of instruments for
  - ▶ Industrial Process Control
  - ▶ Bioanalytics
  - ▶ Radiation Protection
- ▶ Nicely located in the Black Forest (close to Karlsruhe)
- ▶ Since more than 60 years reliable products  
**MADE IN GERMANY**

# Berthold Technologies

- ▶ 1949 Founded by Prof. R. Berthold
- ▶ 1960 Continued by Dr. F. Berthold
- ▶ 1989 Acquisition by EG&G Inc. USA  
(later PerkinElmer Inc.)
- ▶ 2000 Re-acquisition
- ▶ 2008 Sales approx. 60 Mio. €
- ▶ Worldwide 335 Employees
- ▶ Subsidiaries in Belgium, France,  
Italy, Austria, Switzerland, UK  
and USA
- ▶ Quality Management System  
ISO 9001, ISO 14001, KTA 1401

## We offer

Instruments with excellence in  
quality and reliability

Service and advice for the  
customer's special needs

**Process Control**

**Bioanalytic**

**Radiation Protection**

# Products in Process Control

- ▶ Level
- ▶ Density
- ▶ Moisture
- ▶ Bulk flow
- ▶ Basis weight
- ▶ Concentration
- ▶ Sulphur content
- ▶ Process analysis

## Our Customers in Radiation Protection

- ▶ Radionuclide Laboratories
- ▶ Nuclear Medicine
- ▶ Research
- ▶ Nuclear Power Plants
- ▶ Nuclear Industry
- ▶ Other Industries
- ▶ Authorities
- ▶ Nuclear Waste and Decommissioning

EWN , Lubmin, former East German reactors

ZWILAG Intermediate Storage Facility, Switzerland

## Product Lines in Radiation Protection

- ▶ Contamination Monitoring
- ▶ Dose and Dose Rate Monitoring
- ▶ Measurement of Activity and Low-Level- $\alpha/\beta$ -Counting
- ▶ Air Monitoring, Particulates, Iodine, Noble Gas, Tritium
- ▶ Customized Systems

# New Tritium Standard IEC 62303

- ▶ **Radiation Protection Instrumentation – Equipment for monitoring airborne Tritium** (Instrumentation pour la radioprotection – Matériel pour la surveillance du tritium atmosphérique)
- ▶ New Standard issued December 2008
- ▶ IEC Technical Committee TC 45
  - ▶ SC45A Nuclear Reactor Instrumentation
  - ▶ SC45B Radiation Protection Instrumentation
    - ▶ Working Group 13 Monitoring of Airborne Radioactivity
    - ▶ Convenor: Daniel BOULITROP (FR)
    - ▶ Members WG13: Morgan Cox, Mark D. HOOVER , Céline MONSANGLANT-LOUVET, Max POTTINGER, Erich BERGER Gerhardt Langmüller, Alfred Klett and several more

# History Standard IEC 62303

- ▶ Sister to IEC 62302 Noble Gas (project leader Morgan Cox)
- ▶ 45B/327/NP New Project Proposal 2001-06-08
- ▶ 45B/378/CD Committee Draft 2002-07-05
- ▶ 45B/408/CD Committee Draft 2003-05-09
- ▶ 45B/458/CD Committee Draft 2004-11-05
- ▶ Change project leader 2005-06
  - ▶ from Dr. Gerhardt Langmüller
  - ▶ to Dr. Alfred Klett
- ▶ 45B/520/NP New Work Item Proposal 2006-09-08
- ▶ 45B/521/CDV Committee Draft for Vote 2006-09-08
- ▶ 45B/593/FDIS Final Draft 2008-09-26
- ▶ Standard IEC 62303 issued 2008-12

# Scope

- ▶ While IEC 670761-5 covers sampling and monitoring **only in gaseous effluents**
- ▶ IEC 62303 expands coverage to **all possible locations** where tritium could present a radiological hazard
- ▶ Sampling & continuous monitoring of airborne Tritium in
  - ▶ **the workplace**
  - ▶ **gaseous effluents discharged into the environment**
  - ▶ **the environment**

# Scope

- ▶ with the following equipment
  - ▶ installed
  - ▶ portable
  - ▶ transportable
- ▶ conditions
  - ▶ normal operation conditions
  - ▶ Emergency conditions

# Measurement & Functions

- ▶ Sampling & Analysis of air/gas containing tritium
- ▶ Measurement of volumetric activity and its variation in time
- ▶ Actuation of alarm if exceeding predetermined alarm levels for
  - ▶ Activity
  - ▶ Activity concentration
  - ▶ Total activity of released tritium
- ▶ Determination of the total tritium activity discharged over a given time

# Specifications

- ▶ Equipment's characteristics
  - ▶ General
  - ▶ Mechanical
  - ▶ Electrical
  - ▶ Radiological
  - ▶ Safety
  - ▶ Environmental
- ▶ Requirements
- ▶ Test procedures
- ▶ Proper identification & certification of equipment

## Definitions & References

- ▶ IEC 60050-393:2003, International Electrotechnical Vocabulary (IEV) – Part 393: Nucl. Instrumentation – Physical Phenomena & basic concepts
- ▶ IEC 60050-394:2007, International Electrotechnical Vocabulary (IEV) – Part 394: Nucl. Instr. – Instruments, systems, equipment & detectors
- ▶ ISO 2889 general principles for sampling airborne radioactive materials
- ▶ Guide to the expression of uncertainty in measurement (GUM) – ISO: 1995

## Definitions

- ▶ **Tritium:** this standard covers tritium in gaseous or in vapor forms, whether chemically combined or not
- ▶ **Tritium Monitor:** equipment designed for the monitoring of airborne tritium in gaseous effluent discharged to the environment, in the environment and in the atmosphere of a workplace
- ▶ **Tritium Sampler:** equipment designed to collect a sample of tritium in any form for subsequent analysis

# Classification monitoring equipment

- ▶ Selectivity for chemical form of tritium
  - ▶ Gross tritium monitors: respond to all gaseous or vapour forms
  - ▶ Selective tritium monitors: detection of special chemical form (for example tritiated water vapor)
- ▶ Method of sampling & analysis
  - ▶ Flow-through
  - ▶ Batch
- ▶ Measurement range
  - ▶ Low range            < 10 MBq/m<sup>3</sup>
  - ▶ High range           > 10 MBq/m<sup>3</sup>

# Classification monitoring equipment

- ▶ Working conditions
  - ▶ normal operation conditions
  - ▶ Emergency conditions
- ▶ System interface
  - ▶ Local readout and alarm only
  - ▶ Interfaced with a central system
- ▶ Type of installation / power supply
  - ▶ Installed or transportable (primarily using mains)
  - ▶ Portable (primarily using batteries)

# General Design Considerations

- ▶ Detector type not specified
- ▶ Measurement characteristics
  - ▶ Measured quantity
  - ▶ Decision threshold / detection limit
  - ▶ Measuring range
- ▶ Reliability
  - ▶ Operational lifetime of critical components
  - ▶ Adjustment & maintenance facilities
  - ▶ Frequency routine maintenance

# General Design Considerations

- ▶ Capability of operational testing
- ▶ Ease of decontamination
- ▶ Electromagnetic Interference
- ▶ Corrosion resistance
- ▶ Mechanical shock
- ▶ Acoustic noise level
- ▶ Explosive atmospheres

# Equipment components

- ▶ Sampling assembly
  - ▶ Sampling & exhaust pipes
  - ▶ Collection medium
  - ▶ Air pump
  - ▶ Flow Measurement & Control
  - ▶ Pressure Measurement & Control
  - ▶ Inlet Filter
- ▶ Detection assembly
  - ▶ Radiation detector
  - ▶ Protection against condensation
  - ▶ Compensation detectors

# Equipment components

- ▶ Control assembly
- ▶ Indication facilities
- ▶ Alarm facilities
  - ▶ Alarm types
  - ▶ Alarm indication
  - ▶ Alarm test
- ▶ Check source
- ▶ Ambient background shielding / compensation
- ▶ Batteries

# Test conditions

- ▶ Test procedures
- ▶ Standard test conditions
- ▶ Tests with variation of influence quantities
- ▶ Electrical & mechanical tests
- ▶ Warmup-time
- ▶ Environmental tests

# Radiation detection tests

- ▶ Reference Response
- ▶ Test with gaseous & solid sources
- ▶ Linearity
- ▶ Response to other activities
  - ▶ other chemical forms of tritium
  - ▶ radioactive gases other than tritium
  - ▶ ambient gamma and / or neutron radiation

# Annex A: General Conditions of Operation

- ▶ **Effluent Monitoring**
  - ▶ Normal operation conditions
  - ▶ Emergency conditions
- ▶ **Environment Monitoring**
  - ▶ Normal operation conditions
  - ▶ Emergency conditions
- ▶ **Working Place**
  - ▶ Normal operation conditions
  - ▶ Emergency conditions

## Annex B: Preparation of tritiated ref. sources

- ▶ Use of pressurized bottles of tritiated gas
- ▶ Use of tritium ampoules
- ▶ Production of tritiated water vapour by oxidation of tritium gas
- ▶ Production of tritiated water vapors by bubbling tritiated water
